

A Scientist's Equipment

Name _____

Scientists use many different kinds of special equipment in a laboratory. Label the equipment below.

WORD BANK

beaker
test tube
thermometer
Bunsen burner

ringstand
funnel
flask
alcohol lamp

graduated cylinder
dropper
test tube clamp

How Long Is It?

Name _____

The meter is the standard unit of measurement when measuring the length of an object or the distance between two objects. Use either kilometer, meter, centimeter or millimeter to label the unit that would be used to measure the objects in the pictures below.

WORD BANK

meter

kilometer

centimeter

millimeter

Weight, length, area and volume are properties of matter that scientists can measure. Scientists use the units of grams, meters and liters to measure these properties.

Write the abbreviation for each of these units of measurement.

Unit of Measure	Abbreviation
gram	
kilogram	
milligram	
meter	
kilometer	
centimeter	
millimeter	
square centimeters	
cubic centimeters	
liter	
milliliter	

WORD BANK

g kg mg m km cm
mm cm² cm³ l ml

Celsius vs. Fahrenheit

Name _____

The thermometer on this page compares the Celsius and Fahrenheit scales. Label the temperatures on the Celsius and Fahrenheit scales using the temperatures from the **WORD BANK**.

WORD BANK

0	20	32	37
98.6	100	212	70

Balances

Name _____

The mass of an object can be measured using a balance. Two common types of balances are the triple beam balance and the double pan balance.

Name each balance pictured below and then label the parts. The words in the Word Bank may be used more than once.

Balance: _____

Balance: _____

WORD BANK

pointer
pans
triple beam balance

mass (10g each)
riders
double pan balance

beams
pan

Reading a Double Pan Balance

Name _____

To determine the weight of an object using a double pan balance, find the sum of masses needed to balance the two pans. Do this by making the pointer on the balance line up with the indicated line.

Find the mass of each of the objects pictured below.

1. _____ g

2. _____ g

3. _____ g

4. _____ g

Reading a Triple Beam Balance

Name _____

To determine the mass or weight of an object using a triple beam balance, find the sum of the masses shown on all the riders.

Find the mass indicated on each of the triple beam balances pictured below.

1. _____

4. _____

2. _____

5. _____

3. _____

6. _____

Reading a Graduated Cylinder

Name _____

Small quantities of a liquid can be measured using a graduated cylinder. You may notice how the liquid curves up the side of the cylinder. To get an accurate reading, read the measurement at the bottom of the curve, or *meniscus*.

Read the following volumes.

1. _____ ml

5. _____ ml

2. _____ ml

6. _____ ml

3. _____ ml

7. _____ ml

4. _____ ml

8. _____ ml

Chemical Symbols

Name _____

Use the symbols to find the names of the elements needed to complete the puzzle.

Down
 1. Ca
 2. H
 5. S
 7. Hg
 10. I

Across
 3. Pb
 4. O
 6. He
 8. Au
 9. Na
 11. C
 12. Ag

WORD BANK

lead
 sodium
 calcium

oxygen
 carbon
 mercury

helium
 silver
 sulfur

gold
 iodine
 hydrogen

Periodic Table of Elements

Name _____

The periodic table can give you a lot of information about each of the elements. Use the **WORD BANK** to label the type of information that the symbols, names and letters represent for each of the elements.

<div> <div> <div>1</div> <div>H</div> <div>Hydrogen</div> <div>1.00797</div> </div> <div> <div>3</div> <div>Li</div> <div>Lithium</div> <div>6.941</div> </div> <div> <div>11</div> <div>Na</div> <div>Sodium</div> <div>22.9898</div> </div> <div> <div>19</div> <div>K</div> <div>Potassium</div> <div>39.0983</div> </div> <div> <div>37</div> <div>Rb</div> <div>Rubidium</div> <div>85.4678</div> </div> <div> <div>55</div> <div>Cs</div> <div>Cesium</div> <div>132.905</div> </div> <div> <div>87</div> <div>Fr</div> <div>Francium</div> <div>(223)</div> </div> </div>

electrons in outer shell

Label the parts of the helium atom pictured below.

WORD BANK

proton
orbit (shell)

nucleus

neutron
electron

Protons, Neutrons and Electrons

Name _____

The atomic number of an atom is the number of protons in each atom of that element. Because atoms are electrically neutral, the atomic number is also the number of electrons. The atomic mass tells the number of protons and neutrons in an atom. By subtracting the atomic number from the atomic mass you can find the number of neutrons.

Complete the chart below.

Atomic number

Atomic mass

HELIUM ATOM

atomic mass = 4

4

=

ELEMENT	SYMBOL	ATOMIC NUMBER	ATOMIC MASS	PROTONS	NEUTRONS	ELECTRONS
helium	He	2	4			
nitrogen	N	7	14			7
carbon	C	6	12			
sodium	Na	11	23			
iron	Fe	26			30	
copper	Cu		64	29		
silver	Ag	47	108		61	

Write the chemical formula for each molecule pictured below.

WORD BANK

Chemical Formulas

Name _____

A chemical formula is a shorthand way to write the name of a compound. Complete the chart below for each of the formulas.

	Compound	Formula	Elements
1.		NaCl	
2.		HCl	
3.		NaOH	
4.		H ₂ O	
5.		CO ₂	
6.		H ₂ SO ₄	
7.		CuSO ₄	
8.		C ₂ H ₅ OH	

WORD BANK

sodium chloride
water
sulfuric acid
sodium
copper

hydrochloric acid
oxygen
copper sulfate
chlorine
sulfur

sodium hydroxide
carbon dioxide
alcohol
hydrogen
carbon

Use what you have learned about chemicals to complete this puzzle. You may need to refer to your science book or encyclopedia.

Across

1. A substance that contains two or more chemical elements.
3. A simple substance made of one type of atom.
7. The smallest particle that displays the physical and chemical properties of a compound.
8. A negatively-charged particle that orbits the nucleus of an atom.
9. What everything is made of; the smallest unit of an element.

20 Ca Calcium 40 N-2	21 Sc Scandium 45 N-2	22 Ti Titanium 48 N-2
--------------------------------------	---------------------------------------	---------------------------------------

Down

1. Any substance obtained by or used in a chemical process.
2. A positively-charged particle found free or in a nucleus.
4. It stands for the name of an element.
5. **Au** is the symbol for _____.
6. A particle in an atom or by itself with no electrical charge.

WORD BANK

compound
electron

proton

Dry Cells

Name _____

The dry cell is a source of portable power used in flashlights, toys, and radios. There are three basic kinds of dry cells that are commonly used—carbon-zinc, alkaline, and mercury.

Label the parts of this carbon-zinc dry cell illustration.

WORD BANK

positive terminal
negative terminal

zinc container
carbon rod

chemical paste

Light Bulb

Name _____

Label the parts of the incandescent light bulb pictured below.

WORD BANK

bulb
glass support

filaments
connecting and supporting wires

base

contact

Circuits and Switches

Name _____

To be useful electricity must flow in a circuit. Electric circuits can be illustrated with the help of symbols.

Identify the symbols shown here.

Name each circuit pictured below.

WORD BANK

wire
connection
switch

battery
light bulb
parallel circuit

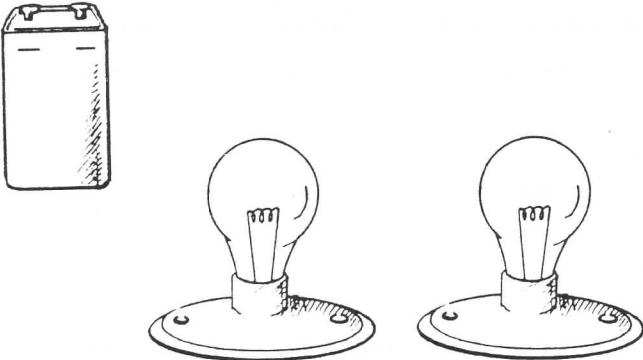

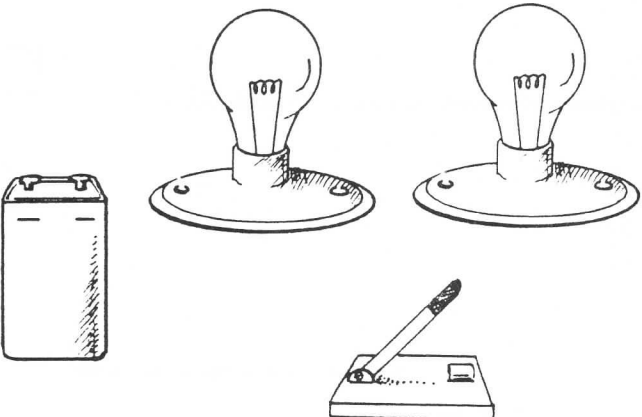

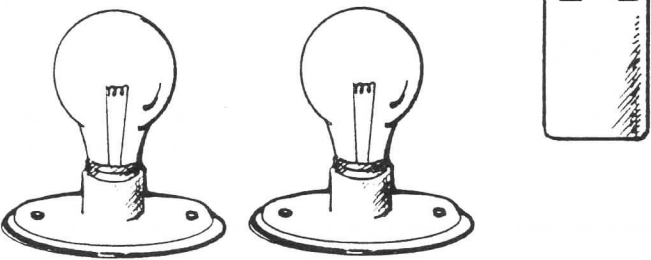

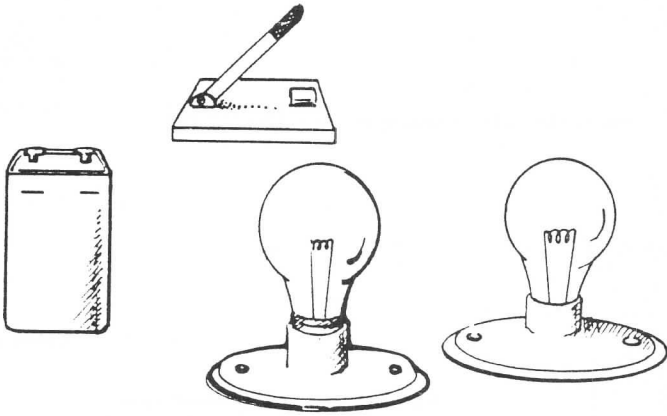

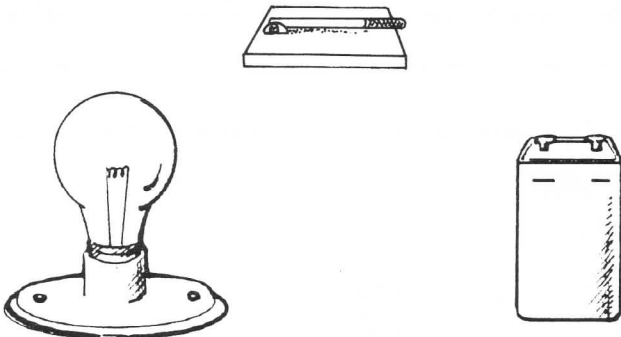

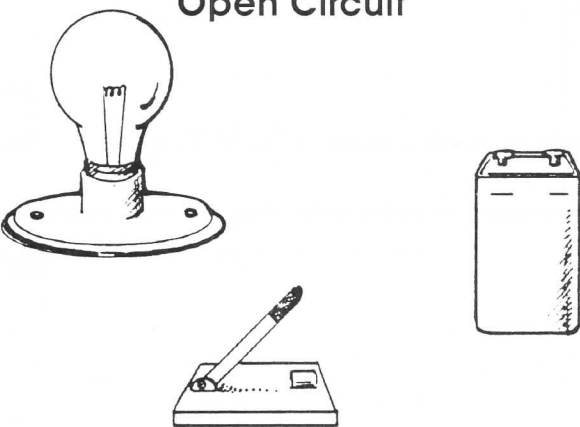

simple circuit
series circuit

Drawing Electrical Circuits

Name _____

There are three types of simple electrical circuits: a closed circuit, a parallel circuit, and a series circuit. Each type can be set up in more than one way.

Draw lines to show where the wires should connect to make the following circuits.

<p style="text-align: center;">Series Circuit</p>  <p>A battery is shown on the left. Two light bulbs are shown to its right, each on its own base. No wires are connected.</p>	<p style="text-align: center;">Another Type of Series Circuit</p>  <p>A battery is on the left. Two light bulbs are at the top right. A switch is at the bottom right. No wires are connected.</p>
<p style="text-align: center;">Parallel Circuit</p>  <p>Two light bulbs are on the left. A battery is on the right. No wires are connected.</p>	<p style="text-align: center;">Another Type of Parallel Circuit</p>  <p>A battery is on the left. A switch is at the top. Two light bulbs are at the bottom right. No wires are connected.</p>
<p style="text-align: center;">Closed Circuit</p>  <p>A light bulb is on the left. A switch is at the top. A battery is on the right. No wires are connected.</p>	<p style="text-align: center;">Open Circuit</p>  <p>A light bulb is on the left. A switch is at the bottom. A battery is on the right. No wires are connected.</p>

Classy Levers

Name _____

Three classes of levers are pictured below. Label each class of lever and the three lever parts.

WORD BANK

first
load

second
force

third
fulcrum

In the space under each picture below write first, second or third to tell the class of the lever.

Special Inclined Planes

Name _____

Some simple machines are pictured below. Some of these simple machines are special inclined planes, called wedges and screws. Put an "X" on the simple machines that are not special inclined planes. Label the special inclined planes either screw or wedge.

Your bicycle is a combination of many simple machines. Study the bicycle on this page. Circle and label as many simple machines that you can find on the bicycle shown.

WORD BANK

lever

wheel and axle

inclined plane (screw)

Compound Machines

Name _____

Often two or more simple machines are combined to make one machine called a compound machine. Name the simple machines that are combined to make each of the compound machines pictured below.

WORD BANK

wheel and axle
lever

inclined plane (wedge, screw)

pulley
